Pharma & Biotechnology
Results Matter. Choose Springer.

• Immediate access to quality Pharma & Biotechnology content
• Single source of content for thousands of eBooks and more than 260 journals
• Custom business models

rd.springer.com
Springer Content Solutions are an ideal resource for corporate clients, providing simple access to a comprehensive library of information in a single location with Springer’s industry-leading tools and features. In Springer’s Pharmaceutical and Biotechnology Content Solutions, we have drawn together leading resources across medicine, the sciences, engineering and the humanities to provide you, pharma researchers and practitioners, with a single source of content to support your drug design and delivery activities.

- Thousands of eBooks including monographs, handbooks, atlases, reference works and book series
- Over 260 scientific journals, most of them with an ISI Impact Factor, and also including partnerships with some of the most renowned scholarly and professional societies in the world

**Key subject areas of interest include:**

- Pharmaceutical Science
- Neuroscience
- Immunology
- Biochemistry
- Analytical Chemistry
- Biotechnology
- Biophysics
- Cell Biology
- Oncology & Hematology
- Internal Medicine
- Rheumatology
- Cardiology
- Orthopedics and Neurology
- Statistical Theory and Methods
- Statistics for Life Sciences
- Medicine and Health Science
- Pharmacology & Toxicology

**Featured journals**

- Pharmaceutical Research
- Diabetologia
- Analytical and Bioanalytical Chemistry
- Osteoporosis International

**Featured books**

- Drug Discovery and Evaluation: Methods in Clinical Pharmacology
- Clinical Trial Simulations
- Pharmaceutical Stability Testing to Support Global Markets
- Drug Metabolism and Pharmacokinetics Quick Guide
Other areas covered in Medicine include: Rheumatology, Cardiology & Angiology, Orthopedics, Neurology, Surgery, Pediatrics, Radiology, Pathology, Ophthalmology, Endocrinology & Metabolism and more.

Other areas covered in Biomedical Sciences include: Immunology, Cancer Research, Medical Microbiology, Human Genetics, Human Physiology, Molecular Medicine, Virology.

Other areas covered in Life Sciences include: Microbiology, Animal Sciences, Plant Sciences, Bioinformatics, Ecology.
Associations

As a publisher of respected journals, Springer has become the preferred publishing partner of some of the most renowned scholarly and professional societies in the world. Here is a list of some of the partnerships we have developed with associations and societies within the Pharmacology Industry:

- American Association of Pharmaceutical Scientists
- International League of Associations for Rheumatology
- International Federation for Medical and Biological Engineering
- American Aging Association
- Controlled Release Society
- The International Society of Pharmacometrics (ISoP)

New: Adis journals now part of Springer

Adis publishes high-quality medical journals with a strong focus on clinical drug evaluation. Publishing a complementary blend of original research, Adis Drug Evaluations and invited reviews, Adis provides an unparalleled evaluation of all available evidence on new and established pharmacological interventions.

- Drugs
- Clinical Pharmacokinetics
- PharmacoEconomics
- BioDrugs

Springer databases of interest to you

SpringerProtocols

Pharmaceutical and biotech researchers need a trustworthy and straightforward source of lab protocols to further their research. With extensive coverage in pharmacology/toxicology, biotechnology, biochemistry, genetics/genomics, molecular medicine, protein science, and other related disciplines, SpringerProtocols is the world’s largest collection of protocols, and an invaluable resource for researchers. Content is sourced from the prestigious Methods in Molecular Biology series, as well as other trusted book series.

SpringerImages

SpringerImages is a rapidly growing collection of millions of scientific and medical images that includes millions of photos, videos, graphs, histograms, tables and more, and is available via a searchable online database. Researchers can directly search and access valuable information previously locked within articles. SpringerImages contains images from high-quality and trusted sources, such as SpringerLink, Biology Image Library and images.MD, with over 500,000 new images added each year. Subscribers have unlimited personal use of the images for the life of their subscription. This covers lectures, presentations, research, and any non-commercial use.
R&D Insight
R&D Insight is a drug pipeline database providing a comprehensive combination of market and scientific drug development and innovation data. Drugs are tracked from discovery to launch with approximately 30,000 drug profiles added to date, covering drug development programs worldwide. The database enables users to easily perform detailed analyses of the marketplace and their competitors to make better commercial decisions.

Pharmacovigilance Insight
Simplify pharmacovigilance literature monitoring and stay up to date with regulatory activities and emerging safety issues with this reliable, fast, and easy to use database. Pharmacovigilance Insight features comprehensive identification, indexing and summaries of all adverse drug reaction case reports published worldwide from all MEDLINE and EMBASE indexed journals, proceedings from scientific conferences, bulletins from National Centers, and news from regulatory agencies and media releases.

Clinical Trials Insight
Clinical Trials Insight is a clinical trial and literature database providing a comprehensive collection of clinical trial information from both ongoing trials and published trial results. With more therapy areas and indications than other sources, plus complete coverage of pharmacoeconomics trials, Clinical Trials Insight provides a unique perspective of the past, present, and future clinical landscape, enabling you to make better informed strategic decisions.

New products and services of interest to you

Papers
Papers is a complete workflow solution, not just a reference manager and citation tool. It is already used by thousands of researchers around the world. Paper users can search 25 different repositories (simultaneously on Mac), find relevant articles in their field, download these articles, organize them (automatic renaming, organizing in collections and smart collections), then read and annotate these articles (highlighting, notes), and finally cite these resources in their next manuscript – all using Papers.

A growing library of documents requires a dedicated workflow to make sure you can find your resources again at a later time, particularly when the time comes to write a manuscript. Papers can help with each of these steps.

Custom Research Service
As part of the Custom Research Service, Springer delivers customized literature research reports and accurate searches according to your specific demands. An international team of researchers, research managers and project managers works on providing you with in-depth knowledge of scientific disciplines and valuable insights to a project in any field. Depending on your needs and required information depth, you can choose from the following three report types:

1. Top Results: Provides an overview of the top results for a certain topic
2. Literature Overview: Delivers a complete and comprehensive literature overview on a specific topic
3. Custom Research Service: Answers your specific research questions as part of our most customized and comprehensive service
Why Springer for R&D?
Created to meet your researchers’ need

- Content categorized according to researchers’ needs
- “Look Inside” functionality available for all content
- Easy search and filter functionalities
- “Recent Activity” showing what your colleagues within your organization are reading
- 24/7 access anywhere and anytime
- Free access to search table of contents, abstracts and editorial background
- Semantic linking technology brings improved results to every search
- Personalization features to keep track of your activities

Springer for R&D, the leading edge in research, is instantly available and easily accessible from virtually any location on any device.

Availability and Pricing
Springer Content Solutions deliver quality information products and services to all types and sizes of organizations from single sites to global businesses with multiple users across locations.

With access to over 2,000 journals and more than 7,000 new book titles every year in the Science, Technology, Medicine and B2B sector, Springer’s accurate, easy-to-use content fits the market needs of all types and sizes of organizations.

Whatever your business needs, Springer promises total flexibility in its bespoke licensing models from low entry deposit options to licensing single content collections or the entire database.

Ask a Springer representative about the ideal solution for your organization today.
