**Aquatic Dermatology**

D. Bonamonte, G. Angelini (Eds.)

Aquatic Dermatology: Biotic, Chemical and Physical Agents

This well-illustrated quick reference book, now in its second edition, is a comprehensive guide to the aquatic skin diseases caused by biotic and non-biotic noxae. It will assist the dermatologist in recognizing and treating a host of unfamiliar conditions that are nevertheless steadily increasing in prevalence owing to wider use of the hydrosphere for holiday, sport, and occupational activities throughout the year. Beyond the thorough examination of the dermatoses caused by a wide range of organisms such as jellyfish, sea anemones, echinoderms, molluscs, algae, aquatic worms, and fish, attention is drawn to potential systemic reactions, which can be serious or even fatal. In [...] More on www.springer.com/978-3-319-40614-5

**Physical Methods in Percutaneous Penetration Enhancement**

Percutaneous Penetration Enhancers in a mini-series format comprising five volumes, represents the most comprehensive reference on enhancement methods – both well established and recently introduced – in the field of dermal/transdermal drug delivery. In detail the broad range of both chemical and physical methods used to enhance the skin delivery of drugs is described. All aspects of drug delivery and measurement of penetration are covered, and the latest findings are provided on skin structure and function, mathematics in skin permeation, and modern analytical techniques adapted to assess and measure penetration. In offering a detailed description of the methods currently in use for [...] More on www.springer.com/978-3-662-53271-3

Melasma and Vitiligo in Brown Skin

This book sheds new light on pigmentary disorders in people with brown skin. Brown skin encompasses many races and ethnicities. Due to migration, people with brown skin are seen almost everywhere in the world. A wide variety of pigmentary disorders exists among this population, but the most disturbing and challenging are melasma and vitiligo. This book covers these two disorders, among people of brown skin, from the epidemiology to management, in a detailed yet easy-to-read and easy-to-use style. **Nonsurgical Lip and Eye Rejuvenation Techniques**

G. Fabbrocini, M.P. De Padova, A. Tosti (Eds.)

This book offers clinical physicians and plastic surgeons a detailed and comprehensive overview of the nonsurgical techniques used for rejuvenation of the lips and eyes. A key aim is to provide practical guidelines for patient selection in order to optimize the choice of treatment in different circumstances. These guidelines will assist in ensuring that the selected rejuvenation technique and the number of applications are appropriate to the specific disorder being treated, thereby maximizing benefits and minimizing side effects. The book explains pretreatment evaluation and describes a wide variety of rejuvenation techniques, including the use of hyaluronic acid fillers, botulinum [...] More on www.springer.com/978-3-319-23269-0

Fortunately, this...

non-dermatologic diseases. All patients suffering from sensation and as a manifestation of dermatologic and management issues both as a common physiological Acute and chronic pruritus can represent significant concepts in pathophysiology and novel therapeutics. experts to provide an in-depth analysis of the causes have recruited a board of internationally renowned reference in the management of pruritus, designed to be a convenient resource for all physicians constructing young patients in the hospital. Case-based Inpatient Pediatric Dermatology fills that void and uses case-based examples to highlight common and uncommon presentations of dermatologic disease in the hospitalized pediatric patient. Complete with useful...

More on www.springer.com/978-3-319-31567-6

Written for pediatric dermatologists, fellows, dermatology residents and medical students rotating in pediatric dermatology, this book covers topics ranging from atopic dermatitis, drug eruptions, neonatal inpatient dermatology, abuse, and skin signs of other systemic diseases. Inpatient Pediatric Dermatology is an emerging subspecialty of Pediatric Dermatology, yet little has been written for the practicing physician treating these young patients in the hospital. Case-based Inpatient Pediatric Dermatology provides a thorough and comprehensive management approach to this type of melasma. The chapters address each aspect of this melasma ranging from clinical presentation, clinical and pathologic diagnosis, surgical management, nonsurgical options, and followup. There is frequent misunderstanding when diagnosing and managing this type of melasma due to the clinical, pathologic, and surgical complexities detailed. Educational resources...

This book provides a comprehensive approach to the diagnosis and management of melasma of the lentigo maligna subtype, specifically. Authors from multiple fields provide educational information along with importantly relevant, practical, and insightful details to improve the understanding and management approach to this type of melasma. The editors are described and managed, reveals the need to consider many aspects on a personal level. New research into the evolution of the skin, influence medical decisions, practices, and therapies. Personalized medicine (PM) and genomics are easily accessible and enable the customization of healthcare using molecular analysis to influence medical decisions, practices, and therapies for the individual patient. The evolution of the skin, and the manner in which dermatological conditions are described and managed, reveals the need to consider many aspects on a personal level. New research data are based on the use of evolutionary medicine and genomics to highlight how we can become more successful at finding...

More on www.springer.com/978-3-319-43785-9

This book is an up-to-date practical guide to the treatment of both common and unusual bacterial, fungal, and protozoal skin infections. Antibiotics and other treatment options for common skin diseases such as acne, rosacea, cryspelas, and impetigo are extensively discussed, and a thorough update is provided on therapies for fungal infections in the nails, hair, and skin. Current treatments for skin symptoms associated with sexually transmitted diseases are also explored in detail. A range of mycobacterial infections are discussed, and a further chapter considers the treatment of protozoal infections, including leishmaniasis, which are often unfamiliar to practitioners in the Western...

Integumentary Physical Therapy
This book is a practical guide to safe and effective physical therapy methods that can be applied in patients with diverse skin ailments, including scars, decubitus ulcers, burns, frostbite, photosensitivity disorders, inflammatory skin disease, skin cancers, obesity-related conditions, psoriasis, herpes zoster, tinea pedis, and vitiligo. For each condition, physical therapy interventions—therapeutic exercises, manual physical therapies, and therapeutic modalities employed in rehabilitation—are described in detail. In addition, information is provided on symptoms and complications, examination and evaluation, medical interventions, and prevention and management methods. In the case[...]

Atlas of Pigmentary Disorders
The skin is colored by a blend of pigments, which form part of a complex and highly regulated process. Pigmentary defects normally present with dyschromia and can be caused by genetic defects, systemic disease, inflammatory processes, metabolic defects, infections, tumors, or toxic or iatrogenic causes. This atlas is an extensive text written by key opinion leaders within dermatology, it has a comprehensive format that guides the reader through the epidemiology, pathophysiology, diagnosis, treatment, and differential diagnosis of both common and rare pigmentary disorders. It illustrates the diagnosis and recognition of pigmentary disorders with a wide range of images.

Management of Ingrowing Nails
Treatment Scenarios and Practical Tips
This book discusses all therapeutic options regarding ingrowing toenails, from conservative to surgery. No single technique is promoted, but a rational approach according to the clinical presentation is proposed. The authors have a wide experience in nail surgery and master all published procedures. In this book they offer to the reader an algorithm of the management of ingrowing nails, as there is no “cure-all” procedure.

High-Risk Cutaneous Squamous Cell Carcinoma
A Practical Guide for Patient Management
This book is a cutting-edge resource that provides clinicians with the up-to-date practical knowledge required in order to manage SCC patients optimally. It summarizes newly available information relating to the definition of high-risk SCC, its pathophysiologic underpinnings, and its management. New prognostic information and staging systems are summarized that enable high-risk tumors to be defined more precisely than ever before. Many helpful tips are provided on the practical management of challenging cases, including multiple tumors/field cancerization, high-risk tumors, nodal metastases, and unrectetable disease. The authors are all acknowledged experts in the emerging field of[...]

Botulinum Toxin for Asians
This book, containing more than 400 photos and illustrations, provides practical guidelines for the cosmetic use of botulinum toxin type A (BTA) in Asians. The differences in BTA treatment of Asians and Caucasians with respect to applicable dose, injection methods, anatomic significance, and indications are clearly described. It is explained how the optimal dose and injection sites for the treatment of wrinkles differ from the guidelines advocated in North America and Europe. Detailed consideration is given to the rapidly expanding role that BTA treatment is playing in facial and body contouring based on leveraging the mechanism of disuse muscle atrophy. Examples that are particularly[...]

Principles and Practice of Photoprotection
Written by internationally recognized leaders, and covering all facets of photoprotection, this book summarizes the beneficial roles of photoprotection in skin cancers, photoaging, photodermatoses, autoimmune diseases, and other skin conditions. It provides an update on the current state of UV filters, boosters, photostabilizers and formulation of sunscreen, and showcases the current techniques and regulation in the evaluating of UV filters and sunscreen products. Furthermore, it discusses the role of nanotechnology, antioxidants, DNA repair technology, and oral and systemic agents in photoprotection. Each chapter
encapsulates decades of clinical, research or practical experience on[...]
