This textbook provides a highly coordinated, interdisciplinary model for future clinical cancer supportive care programs in National Cancer Institute (NCI)-designated Clinical and Comprehensive Cancer Centers and NCI Community Oncology Research Programs (NCORPs). At the same time, it is intended to serve as an up-to-date resource for oncologists and primary care providers that addresses the many aspects of supportive care associated with cancer survivorship. Accordingly, the book covers a wide range of areas and topics, including but not limited to patient navigation, psychosocial oncology, patient and family education, lifestyle change counseling, palliative care, symptom management...

Dying and Death in Oncology
This book brings together in one volume many important topics about death and dying, including the pathophysiology of death, the causes of death among cancer patients, the ethics of death, the legal aspects of death for the physician and for the patient and caregivers, the economics of death, the medical management of the dying patient, including pain and dyspnea, the prediction of death, and the spiritual management of the dying patient. It also discusses other medical and humanistic aspects of death and dying, such as the historical definition of death and various cultures’ and religions’ viewpoints on death and the afterlife. Everybody, including every patient with cancer, will[...]

Management of Soft Tissue Sarcoma
This book presents up-to-date information on one of the hottest topics in prostate cancer, namely bone metastases. The most recent developments with respect to biology, pathology, diagnosis, and treatment are described, providing readers with an excellent understanding of the mechanisms of metastasis formation, the characteristics of metastases, their aggressiveness, and prognostic factors for treatment response. The coverage includes discussion of all of the best available options (laboratory, radiology, and nuclear medicine) for achieving early diagnosis and both established and novel therapeutic approaches. Detailed information is provided on hormonal manipulations, bone-targeted[...]

Cystic Tumors of the Pancreas
Diagnosis and Treatment
This book provides a detailed, up-to-date overview of cystic tumors of the pancreas, with coverage of all aspects of diagnosis and treatment (medical, endoscopic, and surgical). After opening chapters on pathology and classification, cytology, molecular biology, and epidemiology, the role of each of the relevant diagnostic methods is carefully examined. The treatment-related chapters describe surgical approaches, including minimally invasive surgery, as well as ablation modalities and chemo-radiotherapy. Thorough guidance is also provided specifically on the management of cystic tumors in high-risk cases and on
follow-up. The authors are global opinion leaders in their field who have[...]

Immunotherapy for Gastrointestinal Cancer

This book is about the manipulation of the immune system as a therapeutic approach to gastrointestinal cancer and its clinical applications, exploring therapeutic approaches which might be taken under the broad banner of immunotherapy. Starting by introducing concepts of modern immunology, the clinical applications of immunotherapy are then discussed. The reader will learn about the three broad classes of immune therapeutic agents: cell-based treatment; antibody therapy; cytokine application and the key effector cells and mechanisms which might cause tumour rejection. The reverse side of this equation, the genetic and molecular mechanisms which the tumour can use to escape immune[...]

HPV Infection in Head and Neck Cancer

This book is exceptional in presenting an interdisciplinary approach to the subject of human papillomavirus (HPV) infection in the context of head and neck cancer. Leading experts in the field discuss the epidemiology and molecular biology of HPV-positive head and neck squamous cell carcinoma, HPV testing, the nonsurgical and surgical treatment of HPV-positive tumors, predictive factors for outcome and quality of life, and ongoing trials on the effectiveness of vaccination in disease prevention. It also provides recommendations for testing, diagnosis, treatment and vaccination. Otolaryngologists, head and neck surgeons, medical oncologists, radiation oncologists, molecular biologists[...]

Gynecological Cancers

Genetic and Epigenetic Targets and Drug Development

Facilitating the collaboration between the basic, translational, and clinical sciences, this book provides an overview of the genetic and epigenetic mechanisms underlying the formation and progression of gynecological cancers. Gynecological Cancers: Genetic and Epigenetic Targets and Drug Development gathers all of the molecular and cellular aspects of gynecological cancer together within one volume, providing detailed and up-to-date information on the etiology, diagnosis, and treatment of gynecological cancers. Gynecological Cancers: Genetic and Epigenetic Targets and Drug Development also discusses the racial and ethnic disparities in the treatment of gynecological cancers through[...]

Pediatric CNS Tumors

Pediatric CNS Tumors is a detailed review of childhood brain tumors that offers a biologically based perspective on their management. For each tumor type, epidemiology, pathological features, clinical presentation, diagnosis, and treatment are discussed. Particular emphasis is placed on the provision of treatment algorithms that reflect current best practice, and controversies and therapeutic agents under development are also addressed. The closing chapters consider many of the diagnostic and treatment modalities common to all tumors, with special attention to experimental and emerging techniques. This third edition of the book has been thoroughly revised and updated to take into[...]

Non-surgical Ablation Therapy for Early-stage Breast Cancer

Covering the history of breast cancer, theory of radiofrequency ablation (RFA), resection of carcinoma, imaging before and after non-surgical ablation therapy and quality of life, this book focuses on extensive breast-conserving treatment for the preservation of a cosmetically acceptable breast. It investigates the feasibility of percutaneous, minimally invasive techniques to ablate breast tumors and several modalities such as cryosurgery, laser ablation, thermoablation and high-intensity focused ultrasound. Non-surgical Ablation Therapy for Early-stage Breast Cancer cen-
ters on RFA and provides insights into cryoablation and focused ultrasound surgery. RFA has been shown to be[...]

**Breast Cancer Prevention and Treatment**

Uniquely designed for oncologists and general practitioners, this book offers clinicians comprehensive guidelines when dealing with women at high risk for breast cancer. Written by experts in the field on the cutting edge of this research, the following questions will be answered for the reader by the end of the book:
- Who is at elevated risk for breast cancer?
- Who should be genetically screened?
- When and how often should we obtain imaging?
- What type of imaging is adequate?
- What medications are available for prevention?
- When is surgical intervention appropriate?
- What lifestyle changes should be implemented to prevent[...]

**Textbook of Penile Cancer**

The aim of the updated book is to include new developments and update the literature in relation to sentinel node biopsy, new radiology techniques and long-term epidemiological data. This book is useful for urologists, dermatologists, sexual health physicians as well as those with an interest in virology and genomics related to squamous cell cancers. The surgical techniques are all well illustrated with a step by step guide in order to allow those individuals in centres which are not expert centres to undertake the management of this devastating tumour.

**Rare Genitourinary Tumors**

Rare Genitourinary Tumors offers the reader an up-to-date discussion of the less common neoplasms affecting the urinary tract and reproductive organs. Each authoritative chapter provides and in-depth discussion that is frequently not found in other urologic oncology textbooks. A valuable reference for urologists, oncologists, and those in specialty training, this volume provides ready access to information on etiology, incidence, risk factors, diagnosis, prognosis, insights from molecular pathology and, where applicable, data from clinical trials. The practical treatment guidelines included for each tumor type are written by experts and fully referenced.

**Rare Hereditary Cancers**

Diagnosis and Management

This book approaches the differential diagnosis and management of rare, hereditary cancer syndromes from a practical angle, addressing the issues pertinent to each tumour type as encountered by health professionals in their day-to-day practice. This book enables readers to correctly identify patients with rare cancer syndromes who would benefit from genetic counselling and testing, and provides the necessary knowledge for appropriate patient management and advising at-risk family members. It begins by describing recent advances in genetic testing for cancer-predisposing genes. Leading experts from Europe and Australia then offer detailed, up-to-date guidance on the diagnosis and[...]

**Breast Oncology: Techniques, Indications, and Interpretation**

This book presents up to date debates and issues in the world of breast MRI with a very practical focus on how to incorporate current understanding of breast MRI into clinical practice. The book is divided into three key sections, all of which have critical impact for the breast imager: Techniques introduces the reader to the parameters of breast MRI from standard sequences to up-to-date cutting edge techniques. Indications provides a careful review of the accepted indications for breast MRI from High Risk Screening to use of breast MRI, in the context of neoadjuvant chemotherapy with a detailed analysis of the evidence-based support for these indications and a careful look at[...]
to integrate advances into practice. The text opens with background and emerging information regarding the molecular biology of lung cancer pathogenesis. Updated results regarding lung cancer prevention and screening are discussed, followed by chapters on diagnostic techniques and pathological evaluation. This leads on to a detailed presentation of treatment modalities, from surgery and radiation therapy to standard[...]

Cancer, Intimacy and Sexuality: A Practical Approach
In honor of Hilde de Vocht

This book provides a wide-ranging overview of the sexual consequences of cancer and its treatment with the aim of equipping physicians and other health care providers with the awareness and knowledge required in order to offer patients effective treatment. While sexuality may not be the primary focus for cancer patients, at some point, whether because of sexual changes or relationship issues, many patients come to acknowledge the effects that cancer and its treatment have had on their sexuality. Although the impacts are frequently similar, significant variation is observed. Some patients experience changes in all phases of sexual response, while others experience none; moreover, the[...]

Pediatric Cancer in Africa
A Case-Based Guide to Diagnosis and Management

This text is the only book of its kind to provide specific guidance applicable to limited resource settings and builds up from the foundation of general practitioner or general pediatrician competence. Written and edited by leaders in the field, this manual educates physicians on the essential components of the discipline, filtered through the experience of specialists from developing countries, with immediate applicability in the specific healthcare environment in these countries. Typically, manuals of pediatric hematology-oncology are written by specialists from high-income countries, and usually target an audience with a sub-specialist level of training, often assisted by[...]

Alternating Electric Fields
Therapy in Oncology
A Practical Guide to Clinical Applications of Tumor Treating Fields

This concise text provides a complete overview of alternating electric fields therapy -- also known as tumor treating fields -- for glioblastoma and other types of solid tumor malignancies. Readers are given a fundamental understanding of this novel anti-cancer treatment modality by learning from clinical trial data as well as the physical and cell biology effects on tumor cells when alternating electric fields are applied both in vitro and in vivo. Chapters illustrate the physics behind electric field propagation in space and other media. This is followed by a review of our current understanding of the electric field effects on dividing cells - including the disruption of[...]
