Ear Reconstruction

This book comes to its second edition intending to broaden the discussion about the plastic surgical techniques for the reconstruction of the ear. It features a more in-depth discussion of the topics previously addressed, including chapters on microtia, anotia, the upper pole, auricular lobule and complications during and following ear surgery. Furthermore, it addresses a wide variety of deformities of the auricle and surgical topics that were not included in the previous edition, such as: Reconstruction of the tragus and creation of the external auditory canal - key considerations when planning or performing a reconstruction of the ear. New concepts on the surgical anatomy of the ear [...] More on www.springer.com/978-3-319-50393-6

Surgery of the Inferior Vena Cava
A Multidisciplinary Approach

This book addresses an urgent need, offering an updated, detailed and multidisciplinary review of surgery of the inferior vena cava (IVC). Over the past two decades, tremendous advances have been made in this field and related specialties. Many journals and/or textbooks on different surgical or medical specialties have reported on individual aspects, so it is high time to gather all of them in a single resource. To date, surgery of the IVC remains a major challenge, not only in terms of technical difficulties, but also in terms of perioperative management. The book sheds new light on cutting-edge developments, including: Innovations in imaging; Neoadjuvant and adjuvant treatments [...] More on www.springer.com/978-3-319-25563-7

Practical Approach to Peripheral Arterial Chronic Total Occlusions

A practical, highly illustrative and easy to read reference for interventional cardiologists, vascular surgeons, cardiac/endovascular catheterization laboratory personnel, interventional radiologists, technical staff, industry professionals, investigators, and researchers on peripheral arterial CTO interventions. Peripheral CTO lesions are present in nearly 50% of all peripheral arterial disease (PAD) endovascular interventions. There is tremendous growth in the performance and learning of peripheral arterial CTO procedures. There are several ongoing physician courses and many others that are being prepared; however, there is a significant lack of standardized selection, strategies [...] More on www.springer.com/978-981-10-3052-9

The EAES Manual of Endoscopic Surgery provides surgeons and surgical residents with the best practical knowledge currently available on commonly performed minimally invasive abdominal and thoracic procedures. Expert European surgeons share their career-long experience by dissecting operative procedures step by step and highlighting potential technical and anatomical hazards. Authors instruct the reader in a fashion similar to the conversations that take place between master surgeons and their apprentices while scrubbing for surgery. Uniform full color illustrations complete the detailed descriptions of minimally invasive surgeries. In addition to the operative instructions, a key...
Vascular Surgery
A Global Perspective

Vascular surgery has experienced remarkable growth and diversification in the last decade, especially with its embracing the disruptive endovascular technological revolution. Vascular surgeons remain the only group of specialists capable of total treatment of patients with vascular disease, providing medical, minimally invasive, and surgical therapy. Although vascular surgeons practice in all areas of the world, practice patterns in different areas naturally have both similarities and differences that reflect both regional patterns of disease, genetic characteristics of local peoples, cultural preferences for treatment, local political and economic situations, different access to care surgery. It is designed to provide options to that most difficult and uncommon complications in acute care surgery. It will discuss personal traits and ratio-

Evidence-based Therapy in Vascular Surgery

This book is an introduction to quality initiative for vascular surgery and medicine. Originally published in German, the book is written by leading experts who utilise their professional expertise and insight to help raise the level of patient safety, quality of care, and training of junior vascular physicians. This books aims to bring together the best available current treatment and information, including recent guidelines, meta-analyses, and randomised trials to help put evidence-based therapeutic recommendations into practice. Innovative therapeutic treatment options are not currently incorporated within standard procedure, and this book will help physicians include these method-
ods[...]

Complications in Acute Care Surgery

The Management of Difficult Clinical Scenarios

This text provides the reader a starting point for the most difficult and uncommon complications in acute care surgery. It is designed to provide options to that ubiquitous intra-operative or bedside question “Well, now what do we do with this?” The topics have been-
erased such as toxic megacolon, Fournier's gangrene, pyelonephritis and cholecystitis to those less frequently encoun-
tered such as appendicitis, diverticulitis and cholecystitis. Learning objectives for each chapter are clearly defined. In addition to differential diagnosis, the work up and management is comprehensively dis-
cussed. In addition, a pithy clinical pearl is included to serve as a memory aid for each diagnosis. Upon reviewing this volume,[...]

Rehabilitative Surgery
A Comprehensive Text for an Emerging Field

This book represents the first interdisciplinary text on the emerging field of rehabilitative surgery, in which state of the art procedures from multiple surgical specialties are combined. It proposes a completely new framework for understanding, coordinating, and providing treatment for paralyzed or severely neurologically impaired patients and explains the potentially critical impact of surgery in creating a new baseline of functional status, thereby improving the patient’s daily life. Every major aspect of reconstructive surgical treatment is considered, including anesthesia, orthopedic surgery, plastic surgery, neurosurgery, general surgery, vascular surgery, and oto-laryngology.[...]

A How To Guide For Medical Students

This book will be a ‘how to’ guide for medical students interested in pursuing a career in academic surgery. It will discuss personal traits and ratio-

Male Breast Cancer

This book provides an up-to-date review of the risk factors and genetics influencing the development of this rare disease. This volume presents clinical features and recent advances in histopathology and molecular profiling are analyzed, providing a valuable aid to clinicians in tailoring treatment to both the patient and the tumour. Readers will find important insights into the most effective strategies for making or negating a diagnosis of MBC. Within this timely volume, consideration is also given to the psychological needs of men with breast cancer alongside a volume, consideration is also given to the psychological needs of men with breast cancer alongside.

Surgical Emergencies in the Cancer Patient

This text provides a comprehensive textbook summarizing the presentation, workup, and surgical solutions for common emergencies in the cancer patient. The use of medications (antibiotics, hormones, and biologic therapies) and interventional radiologic procedures as adjuncts or as replacements for the surgical solutions are discussed. The text covers emergencies that result as adverse effects for the systemic and local treatments for cancer, emergencies that result from mechanical issues with the cancer and those that result from surviving major extirpative surgery. Diagnosis and treatment of patients’ immune-compromised or thrombocytopenic status from chemotherapy is discussed, as is[...]

Advanced Trauma and Surgery

This book discusses different aspects of trauma surgery, ranging from the various types of trauma and their management, infection, sepsis and inflammation to tissue injury and repair in trauma. It discusses cellular, molecular and genetic research findings and their role in pathogenesis in trauma and injury. In addition, it highlights the translational application of advanced theories and technologies in the management of trauma patients. This book is a valuable resource for anyone involved in the management of severe trauma damage to tissues wanting to reduce early mortality and improve patients’ quality of life.

Lymphatic Filariasis

This book provides up-to-date information on lymphatic filariasis supported with abundant images, tables and algorithms. It is a first such monograph on a disease that has varied presentations which are complete clinical entities, such as chylyria, hydrocele, elephantiasis, etc. This book consists of three parts, parasitology, acute clinical...
manifestations and chronic presentations of the disease. Approximately 120 million people are infected with lymphatic filariasis in tropical and subtropical countries. About a third of these suffer clinical consequences of this infection, and many are seriously disfigured. India, Indonesia and Nigeria are the most endemic countries in the world.[...]

Atlas of FFR-Guided Percutaneous Coronary Interventions

This book reviews the theory and practice of fractional flow reserve (FFR)-guided coronary intervention, a technique that gives sense and a rationale to daily decisions in the interventional suite. FFR guidance provides detailed information on coronary hemodynamics for the interventional cardiologist. This technique has profound practical implications for therapeutic decisions and for the prognosis of patients. The Atlas of FFR-Guided Percutaneous Coronary Interventions provides practicing physicians clear information to understand both the complexity of the technique and the correct way to apply it. It is designed both to assist younger faculty and those in training, and to act as a[...]

Operative Approaches to Nipple-Sparing Mastectomy

Indications, Techniques, & Outcomes

This text is designed to present a comprehensive overview of the evolution, oncologic safety, surgical approaches and outcomes of NSM. The book is targeted at general surgeons, dedicated breast surgeons, and plastic surgeons. There is focus for surgeons just beginning their use of NSM, as well as a review of patient selection criteria, operative approaches, reconstruction options, and management of complications. Chapters are written by experts in the performance and reconstruction of NSM. Chapters are supplemented with appropriate illustrations and photos of NSM techniques and reconstructions. Operative Approaches to Nipple-Sparing Mastectomy: Indications, Techniques, &[...]

Textbook of Hernia

This textbook provides a comprehensive, state-of-the-art review of the field of hernia surgery, and will serve as a valuable resource for clinicians, surgeons and researchers with an interest in both inguinal and ventral/incisional hernia. This book provides an overview of the current understanding of the biologic basis of hernia formation as well as laying the foundation for the importance of hernia research and evaluating outcomes in hernia repair. Diagnosis and management strategies for inguinal and ventral hernia are discussed in detail with separate techniques sections for the most widely used procedures in this field as well as emerging technologies such as a robotic and single[...]

invasive and robotic technology for more comfortable performance of these demanding procedures is covered. A complete description of instrumentation, platforms, and optics developed specifically for LESS is another primary focus of this text. Finally, a description of ...
Contemporary Oral Oncology
Rehabilitation and Supportive Care
This is the last of four volumes that together offer an authoritative, in-depth reference guide covering all aspects of the management of oral cancer from a multidisciplinary perspective and on the basis of a strong scientific foundation. This volume focuses on the topic of comprehensive rehabilitation and supportive care in oral cancer. The coverage includes the role of maxillofacial prosthetics, advances in anaplasticology techniques, and management of oral mucositis during radiation and chemotherapy. Holistic and supportive care approaches are discussed, and advice is provided on post-therapy surveillance and the use of different measures to assess quality of life. Nutritional[...]

Advanced Colonoscopy and Endoluminal Surgery
Each chapter of this new book on advanced lower GI endoscopy and endoluminal surgery focuses on the thought process and step-wise technical approach to the condition and procedure listed. By using this unique method, practitioners ranging from surgeons-in-training, gastroenterologists-in-training and those early in their career to senior colorectal specialists and gastroenterologist who want to incorporate or improve their advanced endoscopic skills will be able utilize techniques and learn from this gathering of experts. The guiding principle of this work is to create a resource for surgeons and gastroenterologists that extends beyond the currently available texts, and that surgeons[...]

Pediatric Digestive Surgery
This book presents and explains the latest developments in surgery for congenital digestive tract malformations, tumors, abdominal trauma, and the most important acquired digestive disorders. Particular attention is paid to minimally invasive and innovative techniques. In addition to clear descriptions of the surgical procedures that highlight useful tips and tricks, for each condition the clinical presentation is well illustrated and information is provided on pathogenesis. The book also includes general chapters that address the anatomy of the abdomen in children, diagnostic issues, the problem of clinical nutrition, and other aspects of management in pediatric patients with[...]

Advanced Thyroid and Parathyroid Ultrasound

This text provides a comprehensive review of ultrasound in thyroid and parathyroid diseases. These topics are presented from a vantage point of complex decision-making encountered in real clinical scenarios. The sections are organized according to a logical structure covering benign and malignant thyroid conditions, parathyroid disease, and ultrasound technology, ultrasound-guided interventions, and innovations. The style of the chapters provide practical, actionable information that is richly illustrated with figures and links to video cine-clips. The chapter topics aim to show how different specialists uniquely apply ultrasound in given clinical scenarios. The text illustrates the [...] More on www.springer.com/978-3-319-44098-9

Vascular Diseases for the Non-Specialist

An Evidence-Based Guide

This book aims to provide non-specialist healthcare practitioners with current, focused and objective information on the most common vascular diseases encountered in daily clinical practice. In day-to-day clinical practice many healthcare practitioners do not have a working knowledge of the most common vascular diseases that frequently arise in patient care. Some of these topics include: aneurysms, peripheral arterial disease, diabetic foot, venous thromboembolism, cerebrovascular disease, aortic dissection, and acute limb ischemia. These commonly encountered vascular diseases are becoming public health issues due to their high morbidity and mortality as well as increasing healthcare [...] More on www.springer.com/978-3-319-46057-4

Robotic Colon and Rectal Surgery

Principles and Practice

The initial chapters discuss the start of minimally invasive surgery and robotics. Subsequent chapters address starting up a robotics program and incorporating robotics into one’s practice. The textbook next centers on specific robotic techniques or robotic management of certain disease processes. These chapters are written by experts in the fields and include multiple tables, illustrations, and videos describing the techniques where applicable. Each chapter also discusses the current literature. The final chapters focus on the future of robotics, cost of robotics, and include other possible future platforms and as well as the new FDA approved Xi and SP Intuitive surgical [...] More on www.springer.com/978-3-319-43254-0

Bariatric Surgical Practice Guide

Recommendations

This book provides a comprehensive review of literature of various aspects of bariatric surgery arriving at practical recommendations for simplifying day to day practice. This book is divided into 10 sections covering selection of patient, preoperative predictors of outcome, technical considerations, specific situations, post-operative pathways, management of complications, revisional surgery, and perioperative nutritional aspects. It covers specific situations in bariatric surgery such as GERD, hernia repair, gallstone disease, PCOD, NAFLD and end-organ disease. Bariatric Surgical Practice Guide is a quick resource for practicing bariatric surgeons, young and experienced, to [...] More on www.springer.com/978-981-10-2704-8

Damage Control Management in the Polytrauma Patient

This book is an unparalleled source of cutting-edge information on every aspect of rescue, trauma management, and fracture care in the polyletraumatic/ multiply injured patient. Damage control surgery is approached logically and systematically by dividing treatment into phases. The common goal of treating life-threatening conditions first, then treating major pelvic and extremity fractures, requires cooperation among all major disciplines and subspecialties involved in the care of polytrauma patients, and the book is accordingly multidisciplinary in nature. It is edited by pioneers in the field and the authors are all acclaimed experts. This second, revised and updated edition of Damage [...] More on www.springer.com/978-3-319-52427-6

Techniques in Minimally Invasive Rectal Surgery

This title encompass all current minimally invasive rectal procedures for a variety of benign and malignant indications and provides a compendium of the available data supporting each technique. Procedures are represented both photographically as well as through selected video clips. The video clips are hosted online and provide a valuable addition to the utility of the text. The text has a substantial pathologic emphasis delineating the conditions for which each technique is most suited. It includes established procedures such as laparoscopic proctectomy, but also describes novel approaches that are gaining the attention of professionals throughout the world, such as transanal[...]

The SAGES Manual of Robotic Surgery

This text is designed to present a comprehensive approach to the various applications of surgical techniques and procedures currently performed with the robotic surgical platform. The initial chapters will address preliminary issues faced by surgeons and staff who may be undertaking these new techniques. These areas include training and credentialing, as well as instrumentation and platforms commonly used for these procedures. Subsequent chapters will focus on specific disease processes and the robotic applications for those procedures, divided among the specialties. Written by unbiased experts in that field, each of

issues, policies, and initiatives in twelve countries with emerging economies, each at somewhat different stages of development. With dedicated chapters on Brazil, China, Colombia, India, Indonesia, Iran, Mexico, Nigeria, Russia, South Africa, Turkey, and Vietnam, the book contains detailed, comparable information about the current urban transport situation in the major cities in these countries. Written by specialists in the field, the book draws on a wide range of information sources to provide up-to-date accounts of each of these countries. By assembling this information in one volume, it[...]

Colon, Rectum and Anus: Anatomic, Physiologic and Diagnostic Bases for Disease Management

This is the first volume in the new Springer Major Reference Work series entitled Coloproctology. The book covers key topics in the anatomy and physiology of the colon, rectum and anus and the diagnosis of colorectal/anal diseases and disorders. It thus forms a sound basis for further volumes in the series that will focus on the treatment of more specific clinical conditions. The subjects addressed in the volume are crucial to effective patient management and the book highlights the fact that adequate diagnostic assessment of a given disease is significantly related to the pathophysiologic interpretation of the pathologic process. The purpose of the volume is to provide readers with[...]

This book was conceived and written to provide a contemporary view of critical urban transport
useful text for residents, fellows and recent graduates

The SAGES Manual: Transitioning to Practice

This SAGES manual will help educate and advise our new and recent surgical graduates on entering the job market. From how to find a job, to contract negotiations, to research and grant proposals, this manual offers pertinent strategies crucial to both surgical and non-surgical subspecialties. Chapters focusing on work-life balance and finding a mentor offer helpful insight to prevent burnout and optimize one's new career. The SAGES Manual: Transitioning to Practice will fill the gap in resident education and prove a useful text for residents, fellows and recent graduates as well as practicing surgeons in all subspecialties of surgery.

Current Concepts of Intestinal Failure

This book provides readers with a succinct but comprehensive overview of current concepts relating to intestinal failure, including its treatment, with a particular focus on recent advancements. The opening chapters address basic aspects of intestinal failure, including etiology, clinical pathophysiology, physiology of intestinal adaptation, and intestinal microbiota. The complications of intestinal failure, such as bacterial overgrowth and intestinal failure-associated liver disease, are then discussed. A series of chapters specifically address important strategies in the nutritional, pharmacological, and surgical treatment of intestinal failure as well as the concept of intestinal failure.

Reimbursement for Surgeons

This text provides the in-depth understanding of the mechanisms that guide coding and reimbursement. The text is meant to be useful to surgeons in practice, both in general surgery and in surgical subspecialties; practice management teams of surgical practices and to resident physicians in surgery. Part 1 of the text addresses the CPT coding process, the relative value unit (RVU), the ICD-9 and ICD-10 systems of classification, Medicare Part B payment rules for physicians, the DRG system and Medicare Part A payment for hospitals, alternative payment models, and the myriad of quality measures of importance to surgeons. Part 2 of the text addresses specific coding in areas where [...] More on www.springer.com/978-3-319-43593-0

Management of Thyroid Nodules and Differentiated Thyroid Cancer

A Practical Guide

This book provides a comprehensive, state-of-the-art review of this field, and will serve as a valuable resource for clinicians and researchers with an interest in the management of thyroid nodules and cancer, including both surgeons and endocrinologists. The book reviews new data about risk factors for nodular disease and cancer, details the management of toxic and non-toxic benign thyroid nodular disease, discusses controversies in the management of indeterminate thyroid nodules and cancer, and reviews the latest data on use of molecular testing for diagnosis and prognosis. Lastly, the book reviews the management of difficult-to-treat thyroid cancers.

Percutaneous Interventions for Structural Heart Disease

An Illustrated Guide

This book presents the percutaneous techniques and technologies most frequently employed in structural interventional cardiology, focusing especially on how to optimize outcomes and minimize risk. Interventional procedures for aortic stenosis, mitral regurgitation, left atrial appendage closure, patent foramen ovale closure, and closure of interatrial and interventricular defects are clearly presented step by step with the aid of a wealth of images. These descriptions are complemented by a case-based analysis of the various structural pathologies and their complications. Clear guidance is also provided on patient selection, preoperative evaluation, and choice of available devices.

This textbook provides a comprehensive, state of the art review of this field, and will serve as a valuable resource for clinicians, surgeons and researchers with an interest in GIST. The book reviews new data about risk factors for the disease, profiles the new staging system for GIST, highlights our current understanding of genetic mutations that lead to GIST, and provides new perspectives about imaging of GIST tumors. For localized disease, a greater appreciation of organ-sparing approaches and the importance of preservation of gastrointestinal function is discussed in detail, and advances in surgical techniques are highlighted, including minimally invasive surgery. For...
Inverse Abdominoplasty
An Illustrated Guide

Written by international experts, this book describes different techniques for abdominoplasty. It starts with a functional anatomy description of the abdomen, followed by a brief overview of current techniques. With the help of numerous illustrations, the reader will gain detailed knowledge of how to perform the inverse full abdominoplasty, the inverse mini abdominoplasty (with and without floating umbilicus) and the secondary inverse abdominoplasty. Lastly, ancillary procedures that can be used in conjunction with inverse abdominoplasty are discussed. By also addressing the potential complications of this surgical procedure, the book offers essential guidelines for surgeons dealing with several critical co-morbid medical conditions and splenectomy. It is especially useful in patients with multiple medical conditions or those with high risk factors for surgery. The book is divided into sections that detail the surgical techniques, indications, and outcomes. It is a valuable reference for surgeons and medical professionals who perform abdominal surgery.

Atlas of Minimally Invasive Surgery for Lung and Esophageal Cancer

This Atlas presents a state-of-the-art review of VATS and robotic approaches to managing lung and esophageal cancers. It discusses cancer staging, physiological evaluation of patients, and patient selection for minimally invasive surgery. The atlas offers detailed descriptions of individual operations accompanied by anatomic drawings, intraoperative images, and 3-dimensional anatomic reconstructions. Written by recognized experts in the field, it provides readers with an unparalleled resource for advancing their skills in managing these cancers. It is a valuable reference work for thoracic surgeons in training as well as in practice who want to pursue minimally invasive surgery. It is [...] More on www.springer.com/978-3-319-53338-4

Complicated War Trauma and Care of the Wounded

The Israeli Experience in Medical Care and Humanitarian Support of Syrian Refugees

This book presents carefully selected case reports that document some of the most important lessons learned at Ziv Medical Center, the northernmost Israeli hospital responsible for the medical care and support of wounded and patients from the Syrian civil war. The aim is to provide practitioners with new knowledge on effective ways of dealing with the emergencies encountered in the context of such conflicts. The case reports cover in particular the specialties of Trauma and Critical Care, Orthopedics, and Surgery, but also relate to Internal Medicine, Ophthalmology, Obstetrics and Gynecology, and Psychiatric Care. Some of the cases of trauma are of a nature not previously encountered. [...]

Extreme Hepatic Surgery and Other Strategies

Increasing Resectability in Colorectal Liver Metastases

This book describes the diagnoses; staging and management of patients with colorectal liver metastases initially considered unresectable and portrays the different strategies to increase resectability along with their tactics and tricks. Colorectal carcinoma is the third most commonly diagnosed cancer in the world and according to recent cancer statistics around 1.23 million patients are diagnosed each year. Of these patients, approximately 50% will develop liver metastases during the course of their disease and around 15-25% are found to have stage IV disease at diagnosis. Liver resection has been recognized as the treatment of choice for these patients, offering overall 5-year [...] More on www.springer.com/978-3-319-13895-4
