Dermatology may be the first specialty to be guided by the principles of angiogenesis because the lesions are visible and response can be easily monitored. Dermatologist already inhibit angiogenesis as part of their treatment of multiple common dermatologic disorders. More on www.springer.com/978-1-4471-7312-0

**Fundamentals of Ethnic Hair**
**The Dermatologist's Perspective**

Written to address the growing trend of hair loss in ethnic populations, *The Fundamentals of Ethnic Hair* elucidates the science of curly hair, demystifies prevailing hair styling trends, and presents practical advice for minimizing the harmful effects of these hair styling practices. Written from a dermatologist's perspective, this textbook seamlessly blends science and practical management. Chapters include physical and chemical properties of the hair, thermal and chemical straightening, extensions, razor bumps and special cultural considerations.

**Atlas of Graft-versus-Host Disease Approaches to Diagnosis and Treatment**

This atlas provides trainees and practicing physicians a visual toolkit to help recognize and manage this difficult condition appropriately. This text highlights the clinical variability of GVHD, and arms readers with the diagnostic clues to categorize patients according to the current grading/staging guidelines. Furthermore, this atlas offers evidence-based diagnostic and treatment algorithms for physicians to use while at patients' bedside.

**Percutaneous Penetration Enhancers: Drug Penetration Into/Through the Skin**

Methodology and General Considerations

Percutaneous Penetration Enhancers in a mini-series format comprising five volumes, represents the most comprehensive reference on enhancement methods – both well established and recently introduced – in the field of dermal/transdermal drug delivery. In detail the broad range of both chemical and physical methods used to enhance the skin delivery of drugs is described. All aspects of drug delivery and measurement of penetration are covered, and the latest findings are provided on skin structure and function, mathematics in skin permeation, and modern analytical techniques adapted to assess and measure penetration. In offering a detailed description of the methods currently in use for [...] More on www.springer.com/978-3-662-53268-3
Nonsurgical Lip and Eye Rejuvenation Techniques

This book offers clinical physicians and plastic surgeons a detailed and comprehensive overview of the nonsurgical techniques used for rejuvenation of the lips and eyes. A key aim is to provide practical guidelines for patient selection in order to optimize the choice of treatment in different circumstances. These guidelines will assist in ensuring that the selected rejuvenation technique and the number of applications are appropriate to the specific disorder being treated, thereby maximizing benefits and minimizing side effects. The book explains pretreatment evaluation and describes a wide variety of rejuvenation techniques, including the use of hyaluronic acid fillers, botulinum [...]

Practical Immunodermatology

This book discusses typical skin diseases from an immunological point of view, introducing the latest immunological techniques and practices. It begins with a brief overview of the human immune system, including the basic concepts and principles as well as the general symbols used in immunology. Part Two describes the human skin as an integral part of the immune system, explaining the immunological roles of major cellular and molecular composites in the skin. Part Three illustrates typical skin diseases that have immunological involvement (immunodermatological conditions). It describes 40 skin diseases, focusing on immunological causes, pathogenesis, pattern of reaction and treatment [...]

Stress and Skin Disorders

Basic and Clinical Aspects

Dermatological conditions are intimately related to stress. Stress can affect, reveal or even exacerbate a number of skin disorders, including alopecia, seborrheic dermatitis, psoriasis, atopic dermatitis, pruritus, herpes, lichen planus, rosacea and urticarial. On the other hand, the skin disease itself could induce a secondary stress for the patient, influencing his or her quality of life. There is increasing evidence that stress influences disease processes and contributes to inflammation through the modulating hypothalamic-pituitary-adrenal axis – releasing neuropeptides, neurotrophins, lymphokines and other chemical mediators from nerve endings to dermal cells. This is one of [...]
Lentigo Maligna Melanoma
Challenges in Diagnosis and Management
This book provides a comprehensive approach to the diagnosis and management of melanoma of the lentigo maligna subtype, specifically. Authors from multiple fields provide educational information along with importantly relevant, practical, and insightful details to improve the understanding and management approach to this type of melanoma. The chapters address each aspect of this melanoma ranging from clinical presentation, clinical and pathologic diagnosis, surgical management, nonsurgical options, and followup. There is frequent misunderstanding when diagnosing and managing this type of melanoma due to the clinical, pathologic, and surgical complexities detailed. Educational resources are also highlighted.

Botulinum Toxin for Asians
K.K. Seo
This book, containing more than 400 photos and illustrations, provides practical guidelines for the cosmetic use of botulinum toxin type A (BTA) in Asians. The differences in BTA treatment of Asians and Caucasians with respect to applicable dose, injection methods, anatomic significance, and indications are clearly described. It is explained how the optimal dose and injection sites for the treatment of wrinkles differ from the guidelines advocated in North America and Europe. Detailed consideration is given to the rapidly expanding role that BTA treatment is playing in facial and body contouring based on leveraging the mechanism of disuse muscle atrophy. Examples that are particularly useful are provided.

Onychomycosis
An Illustrated Guide to Diagnosis and Treatment
A. Tosti, T.C. Vlahovic, R. Arenas (Eds.)
There are an estimated 32 million people with onychomycosis in the United States alone, making it the most common nail disease seen and treated, but also quite misunderstood. With the sole focus of this book devoted to onychomycosis, the reader is provided with insight into the diagnosis and management of this nail infection. Onychomycosis includes chapters on how fungus infects the nail unit, the types of nail fungus, diagnosis from a gross and microscopic view, and the various treatment options available. With chapters written by the world’s experts along with dozens of high quality color photographs and illustrations, this book is a practical reference guide for everyday.

Therapy in Pediatric Dermatology
Management of Pediatric Skin Disease
J. Teng, A.L. Marqueling, L. Benjamin (Eds.)
This book addresses the need for comprehensive review of therapeutic options that are known to be efficacious in the management of cutaneous diseases in children. It summarizes evidence-based literature on clinical responses among pediatric patients, including age-appropriate management strategies. Included is review of the extraordinary developments in understanding of the genetics and pathogenesis of many cutaneous disorders during the past decade, the novel therapeutic options and repurposing of old drugs, and the management of some of the most challenging skin disorders.
