Atlas of Liver Pathology

The liver is a complex organ due to its unique microscopic structure, intricate metabolic functions and susceptibility to a wide variety of insults, manifesting in countless histological patterns. Atlas of Liver Pathology considers both changes seen in medical liver biopsies as well as lesional biopsies when the specimen has been taken from a mass. The book starts by reviewing normal structure and its variants and the optimal approaches for the preparation of histological sections for diagnostic liver pathology. The following chapters are dedicated to developmental, metabolic, infectious, drug related, autoimmune, biliary, vascular and neoplastic disorders. Two sections on liver[...]

Pulmonary Cytopathology

The Essentials in Cytopathology book series fulfills the need for an easy-to-use and authoritative synopsis of site specific topics in cytopathology. These guide books fit into the lab coat pocket and are ideal for portability and quick reference. Each volume is heavily illustrated with a full color art program, while the text follows a user-friendly outline format. This new edition of Pulmonary Cytopathology is fully updated and expanded providing more detailed discussion of the role of new techniques such as EUS needle biopsy and specific issues of adequacy assessment. The section on subclassification of poorly-differentiated non-small cell carcinomas has been expanded to include[...]

Fundamentals of Renal Pathology

Fundamentals of Renal Pathology is a compact and up-to-date resource on the basics of renal pathology that will be of particular value for residents and fellows in training in renal pathology, general pathology, and nephrology, but will also serve as a handy reference for the more experienced. This second, revised and updated edition of the book offers an integrated approach based on contributions from established experts in the field. Key diseases are discussed within the context of clinical presentations, with the emphasis on clinicopathological correlation and differential diagnosis. Topics discussed include glomerular diseases with nephrotic or nephritic syndrome presentations[...]

Viruses and the Lung

Infections and Non-Infectious Viral-Linked Lung Disorders

Viruses that primarily target the lung are very significant causes of death and in the past decade have been responsible for major outbreaks of severe adult respiratory distress syndrome and H1N1 influenza. This book is distinctive in that the entire spectrum of viral disease of the lung is conveniently compiled within

a single volume. The epidemiologic, ultrastructural, immunologic, and clinicopathologic features of well-known viral pathogens and newer emergent infectious agents are discussed in detail. After sections on lung defenses and the taxonomic classification of pneumotropic viruses, the various acute viral infections are considered in a standard format in the main body of[...]

Molecular Diagnostics

12 Tests That Changed Everything

Molecular Diagnostics: 12 Tests That Changed Everything focuses on specific laboratory tests and emphasizes how the availability of these tests has altered how clinicians treat their patients. Presented as a standard outline, each chapter focuses on a specific molecular test and provides background on the test and its clinical applications. Continuing with some discussion on how the test is done, interpreted, and used clinically, each chapter then concludes with a discussion of how that test has changed the way medicine is practiced with respect to the disease or condition in question. Authored by renowned experts in the field, Molecular Diagnostics: 12 Tests That Changed Everything[...]

Pathology of Asbestos-Associated Diseases

The third edition of Pathology of Asbestos-Associated Diseases builds on the success of the previous editions by fully updating knowledge on diagnostic and epidemiologic aspects and presenting important new insights derived from new epidemiologic studies and animal studies. Background information is first provided on the mineralogy of asbestos, occupational and environmental exposure, and asbestos bodies. The various diseases associated with asbestos exposure are then considered in turn, with detailed description and illustration of pathologic features as well as extensive discussion of etiology, epidemiology, differential diagnosis, treatment, and prognosis. Further chapters are [...]

Practical Informatics for Cytopathology

Practical Informatics for Cytopathology provides a concise and practical overview of pathology informatics. The book offers a succinct overview of basic computing and laboratory information systems applied specifically to the field of cytopathology. Readers are exposed to emerging areas in pathology informatics, such as specimen tracking and digital imaging. Valuable features of this volume include summary tables, diagrams, vital resources and a glossary of informatics terms to help readers. Written by authorities in the field, Practical Informatics for Cytopathology is a vital resource that provides users with a solid, comprehen-

sive foundation and practical working knowledge of the [...]

Lee's Ophthalmic Histopathology

Completely revised and updated, this well-illustrated and practically-oriented text has retained its general layout and style and division into specimen-type based chapters. The visual image remains key to explaining the pathological processes and this is facilitated by full colour photography throughout the text. The book emphasizes pertinent recent advances which augment the morphological study of disease. There is updated information on clinically important aspects, immunohistochemistry, tumour cytogenetics and molecular biology. Illustrations include macro specimens, microscopic specimens and illustrations of additional techniques - immunohistochemistry, molecular analyses and [...]

Pathology of Pediatric Gastrointestinal and Liver Disease

Pathology of Pediatric Gastrointestinal and Liver Disease provides the pediatric pathologist, the GI or general pathologist, and the pediatric gastroenterologist with the most complete and current reference on the subject. With an emphasis on clinical-pathological correlation, the book includes in-depth discussions on disorders and issues that are frequently encountered but for which up-to-date information is often not readily available, as well as infrequent disorders unique or specific to children that are not covered in standard texts. Among the topics considered are malabsorption and motility disorders, immunodeficien-

cies, including AIDS, developmental malformations, food [...]

Frozen Section Library: Endocrine Organs

The Frozen Section Library series provides concise, user-friendly, site specific handbooks that are well illustrated and highlight the pitfalls, artifacts and differential diagnosis issues that arise in the hurried frozen section scenario. Written by expert surgical pathologists, Frozen Section Library: Endocrine Organs presents common and practical problems including follicular adenoma versus follicular carcinoma, papillary thyroid carcinoma versus reactive change and freezing artifact, follicular variant of papillary thyroid carcinoma, and medullary thyroid carcinoma. Anaplastic carcinoma, thyroid lymphoma, resection margin of a pancreatic endocrine tumor, pheochromocytoma within [...]
