## Investigative Interviewing

This edited volume reviews the latest research on investigative interviewing in order to provide insights on the psychological processes of the person being interviewed as well as to offer guidelines for conducting credible and useful interviews. Critical and controversial areas are highlighted (eg. false confessions, child interviewing) in order to bring clarity to how these interrogations are to be conducted. Chapters focus on these areas to provide comprehensive views of theoretical, evidence-based background, as well as practical considerations of interrogation settings and procedures. The contributors are internationally respected scholars in the field of psychology and law with [...]

## Near-Death Experiences Heavenly Insight or Human Illusion?

The expression "Near-Death Experience" is associated in the popular understanding with access to knowledge about our transition between the states of life and death. But how should such experiences be interpreted? Are they verifiable with scientific methods? If so, how can they be explained? Attempting to relate matters of scientific knowledge to subjective experience and the realm of belief is a difficult balancing act and has led to a variety of approaches to the topic. This work scrutinizes the diverse views and also myths, about near-death experiences and describes them from a scientific standpoint. Situated at the intersection of neuroscience, psychology, philosophy and religious [...]

## Practitioner's Guide to Curriculum-Based Evaluation in Reading

The educators are dedicated and concerned. The curriculum is successful. Yet some students aren't reading at grade level, and meetings air problems without making progress. Many students continue to flounder, leading to more meetings with the same lack of meaningful results. The Practitioner's Guide to Curriculum-Based Evaluation in Reading gives researchers and professionals the means to break this frustrating cycle, crafted by authors who have not only been there and done that, but can explain in depth how to replicate the method. Focusing on reading but applicable across subject areas, this highly accessible guide defines curriculum-based evaluation (CBE), provides conceptual [...]

## Mindful Parenting

### A Guide for Mental Health Practitioners

Despite its inherent joys, the challenges of parenting can produce considerable stress. These challenges multiply—and the quality of parenting suffers—when a parent or child has mental health issues, or when parents are in conflict. Even under optimal circumstances, the constant changes as children develop can tax parents' inner resources, often undoing the best intentions and parenting courses. Mindful Parenting: A Guide for Mental Health Practitioners offers an evidence-based, eight week structured mindfulness training program for parents with lasting benefits for parents and their children. Designed for use in mental

## Identifying, Assessing, and Treating Bipolar Disorder at School

Identifying, Assessing, and Treating Bipolar Disorder at School presents child and education practitioners with an evidence-based framework for accurate identification, assessment, and intervention of bipolar disorder. This straightforward resource clears up misconceptions about the condition, and outlines its complex presentation in young people, where it may appear in tandem with other disorders and bring challenges to treatment. By providing information to assist in referrals, consultations, and recommenda-

tions for special education, the authors give the reader a unique vantage point for improving students' learning environment and helping to facilitate the work of fellow[...]

## Supporting Families Experiencing Homelessness

### Current Practices and Future Directions

Homelessness among families with children in the U.S. is rising rapidly due to the economic downturn. Supporting Homeless Families: Current Practices and Future Directions aims to raise the standard of services provided to families without homes through practices that are strengths-based and culturally competent. This book provides a contextual overview of family homelessness. An ecological and developmental framework for understanding the implications of homelessness from infancy through adulthood are presented with reference to existing research. The book also addresses innovative designs for providing collaboration between and among diverse services that interface with[...]

## Men Trapped in Men's Bodies

### Narratives of Autogynephilic Transsexualism

There are few topics in sex research as compelling and confounding to researchers, clinicians, and the general public as that of transsexualism. Upending normative notions of gender, eroticism, and identity, it poses significant scientific and clinical challenges. The book addresses a fascinating and largely unexplored topic within the study of transsexualism: The feelings and desires of conventionally masculine men who are attracted to women yet want to become women themselves. Through a collection and discussion of vivid first-person narratives, the book provides an in-depth examination of these men's unusual propensity to be sexually aroused by the thought of themselves as women[...]

## Biopsychosocial Perspectives on Arab Americans

### Culture, Development, and Health

Sylvia C. Nassar-McMillan, Kristine J. Ajrouch, and Julie Hakim-Larson, Editors One way integrative approaches to health care improve on traditional medical models is by recognizing the impact of cultural factors on health. While this evolution benefits clients of all ethnicities, it holds added significance to treating individuals of Arab descent, who face a wide range of new challenges and stressors in post-9/11 America. Biopsychosocial Perspectives on Arab Americans introduces an interdisciplinary lens by bringing together vital research on culture, psychosocial development, and key aspects of health and dis-

ease to address a wide range of salient concerns. Its scholarship mirrors[...]

## Diagnostic Assessment of Learning Disabilities in Childhood

### Bridging the Gap Between Research and Practice

Diagnosing learning disabilities (LD) in children has never been an easy task. The multiple approaches in use complicate the assessment process, raising the risk of young students getting the wrong services, or none at all. It is clear that more accurate diagnosis and classification methods are needed to advance the prevention and treatment of difficulties in reading and mathematics. Diagnostic Assessment of Learning Disabilities in Childhood takes important steps to cut through the confusion. This timely resource weighs the strengths and weaknesses of commonly used assessment methods including the aptitude-achievement discrepancy, cognitive processing, RTI and low achievement[...]

## Virtual Reality Based Treatments for Anxiety Disorders

Behavioral therapy has been a traditionally effective method of treating anxiety disorders. In this therapy, patients learn that the more that they expose themselves to a fearful situation, the better they will be able to cope with more anxiety-provoking situations in the future. Virtual reality treatment is structured in the same way as traditional behavioral therapy. The big difference is that patients are exposed to virtual environments and not real situations. VR treatment makes it possible to recreate the painful stimulus, enabling

both the patient and clinician to have complete control over the situation. VR also allows patients to confront fears that are not easy to simulate[...]
